

# HDI RISK CONSULTING

Avoiding losses by professional risk engineering.

## Actively minimizing global risks.

HDI Risk Consulting (HRC) supports companies with the identification and assessment of risks and the development of appropriate, individual protection concepts. Over 170 engineers and experts from a wide range of technical disciplines provide worldwide customized Risk Engineering services. The HRC Academy regularly offers professional training programs for risk engineers as well as tailored client seminars upon agreement.

### HRC at a glance

#### Business Interruption & Natural Hazards

- Cross-field risk analysis
- Risk identification and recommendation of suitable loss prevention measures (Bottlenecks, dependencies, natural hazard exposures)
- Verification of implemented measures on effectiveness
- Support in Business Continuity Planning

#### Property & Engineering

- On-site inspections (Locations, construction projects, equipment installations)
- Assessment and implementation of organizational and technical risk mitigation measures
- Development of customized safety standards
- Provision of practical loss prevention solutions

#### Marine

- Global risk engineering services including on-site inspections
- Assistance with the organization of multimodal shipments, e.g. route surveys
- Analysis, assessment and improvement of warehousing and shipping conditions
- Training in a range of logistics related disciplines, including packaging technology and cargo securing

#### Experts' tip

#### More transparency with GREEN

With **GREEN** (Global Risk Engineering Extranet) companies get the maximum transparency and diverse support for risk management. With the systematic recording and assessment of company specific risks it is able to achieve globally consistent standards. The internet platform provides access to up-to-date risk information at any time – beginning with changes in risk quality up to documentation of the planned implementation of measures.

#### Motor

- Risk related fleet analysis
- Development and implementation of individual measures for risk prevention
- Comprehensive and detailed advice on issues for fleets/ vehicle pools and support in negotiation with service providers
- Risk engineering analysis for dealerships and implementation of suitable mitigation measures for fire and burglary risks
